

Meetify

Senior Design Project
CS 2021

Project Goal

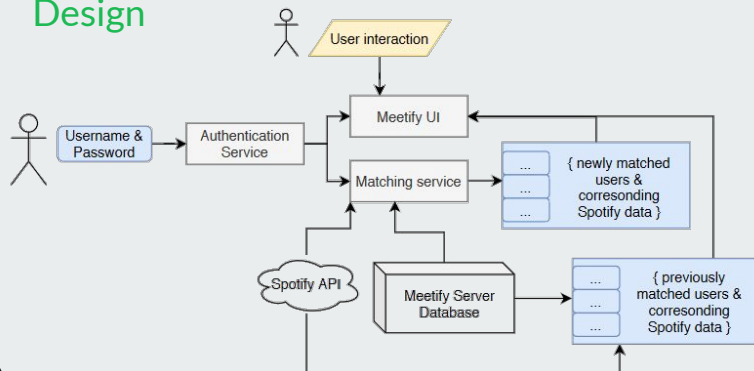

Our goal in developing Meetify was to create a service where users could meet others with music tastes similar to their own.

Current Status

We currently have a fully-integrated application able to connect to a locally hosted server.

If we continue the project, we hope to host the entire site on a dedicated domain with more robust security and UX configurability.

Design

Dustin Seger
Computer Science

Jake Steuver
Computer Science

Rob Boeckermann
Computer Science

Advisor: Bret Patton - Software Engineer at Paycor

Challenges

- Scalability
- Matching algorithm
- Following REST API concepts
- Front-end design & cleanliness
- Data flow management

Lessons Learned

- Organization is key
- Design and research before implementation
- Aim for MVP before focusing effort on edge case features

Technologies Used
